

POSE RECOGNITION

SELF INTRODUCTION

Name : Yoga Dwi Pramana

Place and Date of Birth: Bogor, 30 January 2007

Education : SMK Wikrama Bogor

Experience :

• Internship at Nigmagrid Indonesia

• Work As Freelance

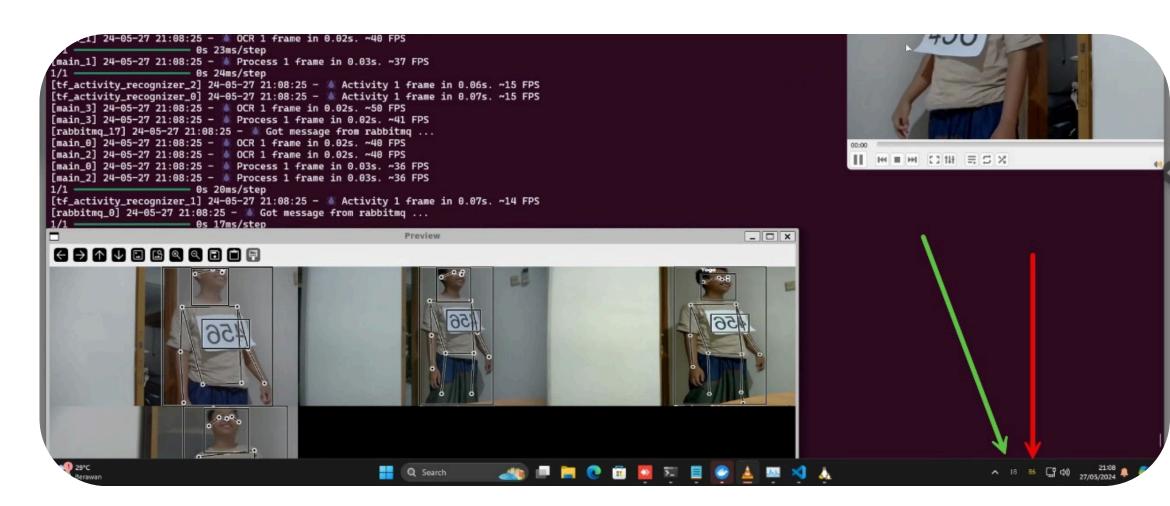

GENERAL INFORMATION

Pose recognition systems identify human body postures from images or videos, enabling applications like motion tracking, activity detection, and security.

TARGET USER

- Developer: Added pose recognition feature to the app.
- Security: Keep an eye out for suspicious movements or activities.

KEY FEATURES

READING ACTIVITY 01

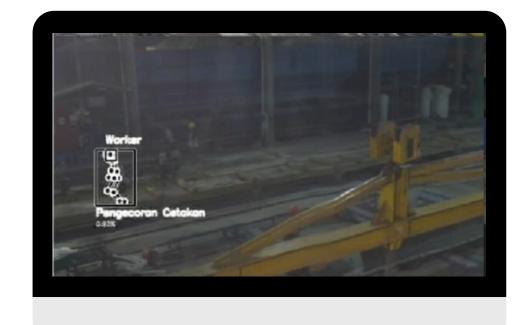

to find out what activities the object does

READ OBJECTS 02

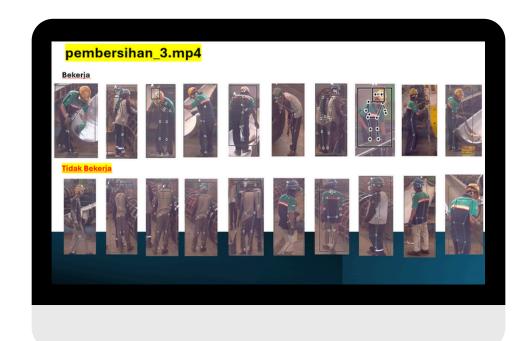

to find out whether the object is human or not and also whether he is a worker or not

READ BODY POINTS 03

to find out the location of every point on the body so that it becomes a skeleton

READING ACTIVITY

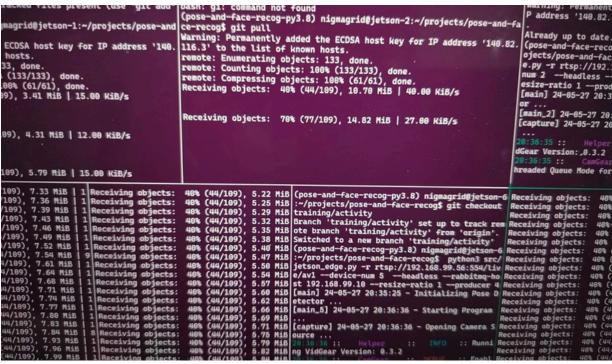

01

Put a camera: Set up a camera to capture the whole body.

02

Run the app: Open the pose detection app. It will recognize body parts.

READING ACTIVITY

Do postures: Stand, sit, or move. The app will detect your posture.

See the results: The app displays and labels body postures.

READING ACTIVITY

data for later.

TESTIMONY

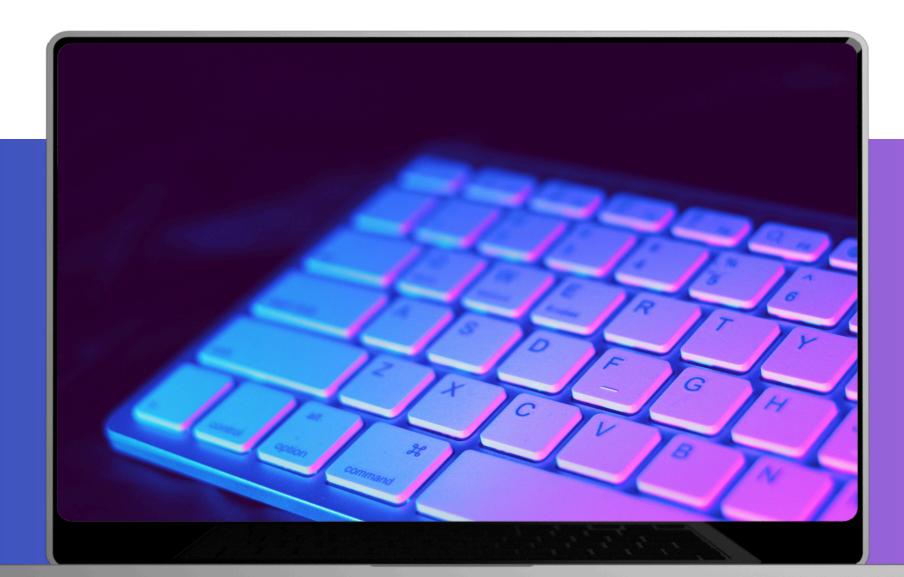

Pose recognition improves motion tracking and security by accurately detecting body movements like standing or sitting. It's useful in healthcare, sports, and interactive applications.

CONCLUSION

Pose recognition improves motion tracking and security by accurately detecting body movements. It's useful in healthcare, sports, and interactive apps.

THANK YOU
